

Declaration of our FSC[®] and PEFC[™] Chain of Custody Commitment

As it is reflected in Tompla's Environmental Policy the Conservation of the environment is one of the main concerns for Tompla.

It is deployed through a proper control level and a continuous environmental improvement of the different activities and facilities in our company, and also, by providing products and services with an increasingly favorable environmental profile.

It is precisely in this area, in the firm determination of supplying envelopes made with paper from sustainable and controlled sources, where the principles of our Chain of Custody Commitment, are established

Tompla has concentrated its efforts on the definition and documentation of a Chain of Custody Management System in accordance with the requirements of the international standards PEFC[™] (Programme for the Endorsement of Forest Certification schemes) and FSC[®] (Forest Stewardship Council[®]).

The certification of the chain of custody implies the evaluation of the forestry production line, from the tree to the end product, including all the processing, transformation, manufacture and distribution stages, to verify that the wood used comes from a well-managed forest. Due to which Tompla keeps its commitment to implement and maintain the chain of custody requirements in accordance with the international PEFC[™] and FSC[®] rules.

With the implementation of the Chain of Custody System, Tompla maintains the effort to guarantee that the paper it uses to manufacture its envelopes comes from well-managed, FSC[®] or PEFC[™]-certified and other controlled forestry operations, where ecological, social and responsible forest management values are observed.

Tompla has set out as a priority not to purchase raw materials from illegal felling or conflictive sources, due to which it will demand the necessary requirements from its suppliers to guarantee this.
